1 Introduction

The Git It Done team developed Taxi Tap, a project that required strong collaboration, communication, and adaptability to achieve success. Throughout the development process, our team demonstrated consistent teamwork, shared responsibility, and mutual respect. This document highlights how we embodied the principles of the Team Work Excellence Prize — through clear and effective communication, inclusive decision-making, strong conflict resolution, and a positive, collective team culture.

2 Clear and Effective Communication

Throughout our project, we had multiple ways of communicating with each other to maintain clear communication:

- Regular communication channels: Our team stayed in touch via our Discord channel, where we had our online meetings and shared all the resources and meeting minutes. We also have a WhatsApp community where we have different groups for different discussions to stay on track with what is going on in which part of our system. Within this community, we have groups for Backend, Frontend, Pull Requests, and an overall general chat to keep in contact and give quick updates. We also have a Slack channel that we use for communication with our client. We used Amazon Chime to meet with the client. Our group meetings were at least twice a week, but we encountered weeks with more meetings and longer meetings. We met with the client at least every two weeks to make sure that they are still happy with the progress of the application, as well as to ask for advice and get feedback from the client's side. We also used a Project Board on GitHub to keep things moving and to be able to see who is working on what at certain points in time.

- **Transparency:** Our group shared information through the various channels discussed above. In our weekly stand-ups, we shared our progress of features with the rest of the group, as well as our goals we wanted to achieve before the next meeting, and we presented the challenges we had with the features being implemented. We also made sure to help find solutions as a team to any challenge that a member was struggling to overcome. We also made sure to communicate clearly and respectfully so as not to cause tension in the group. Any tension in the group caused by stressful times was addressed immediately and solved by giving each person a chance to raise their opinion and working as a group to overcome the challenge.
- **Clarity and Feedback:** We kept our group transparent by having all members voice their ideas. Every group member had the opportunity to present their solution to a problem. We were respectful by letting them explain their ideas and listening carefully to understand and be able to give feedback on the topic. Feedback was given respectfully, and we worked as a team to find a solution to our problem that everyone agreed with.
- **Documentation and updates:** After every meeting (group meeting, meeting with the client, meeting with our lecturer mentor), we made sure to upload meeting minutes so that all group members could go back and see what was discussed and what other members, including themselves, had to do. We made sure to keep our Project Board on GitHub up to date by adding issues and assigning them as we approached a new task. We also made sure to keep notes of everything we changed so that we could communicate with the group if they had any questions about things that changed drastically. We also made sure that we set out a good game plan for our more challenging features so that we did not fall behind or misunderstand any parts of that feature. We all then worked off of the game plan to implement the feature correctly and on time.

3 Inclusive Decision-Making and Shared Responsibility

Our team did the following to ensure inclusive decision-making and shared responsibility:

- **Equal voice:** We have a safe environment where all team members are encouraged to share their ideas, regardless of their role or seniority. All team members were given an opportunity to provide the group with their ideas and/or solutions to a problem.
- **Consensus-building:** The group made a decision about which idea was best to follow to achieve the overall goal of the team, which was to complete the application. No idea was followed because of the person's role in the group, but rather based on which solution worked the best for the project.
- **Task ownership:** After discussing what needed to be done within a given time frame, we made sure that the tasks were split up evenly. Some tasks had only one person working on them, while other tasks had two or more team members working on them. This distribution of work was based on which interests you had in the system, as well as how much work you already had to complete. The tasks were

also divided up fairly by making sure that more difficult tasks had enough time and team members to be completed.

4 Strong Conflict Resolution and Adaptability

Our team approached conflict resolution in the following ways:

- **Conflict management:** As a team, we tried to make sure that conflict didn't arise easily. In the cases where there was conflict, we tried to focus on finding a solution rather than giving blame. As mentioned before, when there was conflict or tension in the group, we discussed it as soon as possible to make sure that we found solutions to handle any difficulties we faced as a group.
- **Respectful dialogue:** As a team, we ensured that we were respectful towards each member. We made sure that all members were coping by having informal conversations to keep the human connection within the group. We ensured that we stood as a team when there were tough discussions, as well as being empathetic when a group member was going through a difficult time.
- **Learning from challenges:** We made sure that after facing a challenge, we did not let it stop our team from reaching its full potential. We used any feedback to improve as individuals and as a team.
- **Adaptability:** As a team, we ensured that our strategies adjusted accordingly when facing unexpected issues. For our group, it was being only 4 members in the group. As a group, we adjusted and made sure that each person took on a bit more work to make sure that not only one person suffered because of this situation.

5 Collective Ownership and Positive Team Culture

As a team, we ensured this by having:

- **Shared goals:** As a group, finishing the project is a shared goal. We all focused on what is best for the team and the project outcome, not just how it would reflect personally. We measured success by the collective achievement and not by who did the most. As a team, we share credit for the application, even if our contribution wasn't the most visible part.
- **Mutual support:** As a team, we made sure to understand what each team member was working on. This was to be able to give advice when needed and jump in when someone needed help. We celebrated each other's wins and encouraged each other to ask for help when needed.
- **Trust and respect:** As a team, we made sure not to speak harshly towards each other, so as to create a safe environment for everyone. We also wanted everyone to feel like they bring value to the team; thus, we treated each other with respect and trusted each other throughout the project.

- Pride and identity: As a team, we wanted to make sure that everyone felt like they belonged and were motivated. We had some inside jokes and also made sure to celebrate after each big accomplishment, such as after each demo. We also had a lovely team-building dinner during one of our holidays to get to know each other in a different environment and make sure that everyone knew that behind each member of the team, there is actually a real person.
